

## 304 Cable Tray Manufacturer

### Overview

Stainless Steel Cable Tray Material Supplier (316L/304) Leading supplier of 316L and 304 stainless steel materials. We provide high-strength, US Tray Atkor.

### Key Takeaways

Several manufacturers specialize in 304 stainless steel cable trays, offering wire mesh, ladder, and perforated designs for industrial and commercial applications. Leading Manufacturers and Suppliers

- VALDINOX – Specializes in wire mesh cable trays with integrated fixing systems for faster installation and enhanced safety. They offer custom solutions and high production capacity to meet demanding delivery schedules, making them a key player in Europe for 304 stainless steel trays (VALDINOX) .
- Ghinox – Provides stainless steel cable trays in 304 and 316L, including ladder and perforated types. Their products are suitable for indoor environments, commercial buildings, and industrial plants. 304 is recommended for dry indoor use due to its cost-effectiveness and excellent welding/forming performance (Ghinox) .
- DirectIndustry Suppliers – Platforms like DirectIndustry list multiple manufacturers such as OBO Bettermann, Ebo Systems, and CARPEL, offering 304 stainless steel cable trays in wire mesh, ladder, and perforated designs. These trays are used in data centers, industrial plants, and commercial buildings (DirectIndustry) .
- Gersan – Offers stainless steel 304 cable trays alongside galvanized and aluminum options. Their trays are suitable for food and beverage industries, airports, ships, and refineries, providing hygienic and corrosion-resistant solutions (Gersan) .

- Ekabel24 – Supplies a wide range of stainless steel cable trays, including ladder and perforated types, compliant with DIN EN 61537 standards. Their products are ideal for electrical contractors, industrial facilities, and research centers (Ekabel24) .

#### Applications and Considerations

- 304 stainless steel is ideal for indoor environments, commercial buildings, and low-corrosion industrial plants. It is cost-effective and easy to weld and form, but less resistant to chloride or coastal environments compared to 316L (Ghinox) .
- Wire mesh trays are lightweight and flexible, suitable for data centers and telecommunication lines.
- Ladder trays support heavy power cables in industrial plants and tunnels.
- Perforated trays allow ventilation and drainage, suitable for medium-load power and control lines.

#### Summary

For projects requiring 304 stainless steel cable trays, manufacturers like VALDINOX, Ghinox, Gersan, and OBO Bettermann provide reliable options across wire mesh, ladder, and perforated designs. Selection should consider environmental conditions, load requirements, and installation preferences to ensure durability and compliance with standards.
