

Dutch data center power distribution box manufacturer

Overview

AP Nederland We supply Power Distribution Units (PDUs), busbar systems, branch boxes, low voltage distribution panels and solutions for energy Legrand Data.

Key Takeaways

Key Dutch manufacturers of data center power distribution boxes include Schleifenbauer, Vello Elektro, and AP Nederland, offering both standard and highly customizable PDUs. Schleifenbauer

Schleifenbauer is a Netherlands-based manufacturer specializing in customized PDUs for data centers. They provide solutions that integrate hardware and software for real-time energy monitoring and control at the rack level, including modular and hot-swappable communication modules. Their products are available under the Schleifenbauer brand or as private-label OEM solutions. All development and production occur in-house in the Netherlands, ensuring high quality, sustainability, and rapid delivery, with lead times of up to four weeks for custom orders. They have produced over 100,000 different types of PDUs, ranging from simple power strips to advanced intelligent units, and offer complementary energy management software called EnerTree .

Vello Elektro

Vello Elektro manufactures the POWERBOX and POWERCUBES series, designed for robust and flexible power distribution in challenging environments. Their distribution boxes can handle up to 2000A, with all sides available for input or output, and feature easy access to components for maintenance. The modular design allows stacking and combination to achieve the desired size, and branding customization is available for larger orders. These units are suitable for high-demand applications where mobility, protection, and accessibility are critical .

AP Nederland

AP Nederland specializes in design and production of switch boxes, low-voltage distribution panels, and PDUs under their own brand OEC Power Solutions. They serve data centers, medical, industrial, and office applications. AP offers modular power solutions, busbar systems, branch boxes, and energy management solutions. Their production emphasizes efficiency, flexibility, and high quality, with global distribution capabilities. AP is part of Dool Industries and operates from Kolham and Schiphol-Rijk in the Netherlands .

Summary

For Dutch data center power distribution solutions, Schleifenbauer is ideal for highly customizable, intelligent PDUs with integrated energy management, Vello Elektro provides robust modular distribution boxes for high-current applications, and AP Nederland offers a broad range of modular and low-voltage solutions under the OEC brand. All three manufacturers emphasize quality, flexibility, and local production, making them reliable choices for data center infrastructure in the Netherlands.
