

Explosion-proof distribution box has stable performance

Overview

The explosion-proof distribution box uses explosion-proof, anti-corrosion, and waterproof designs to ensure stable operation under extreme conditions, avoiding production accidents or casualties caused by electrical failures. What is an explosion-proof distribution box?

An explosion-proof distribution box is a special electrical equipment designed for flammable and explosive. For the distribution of lighting or power lines, electrical equipment on-off control or inspection and maintenance distribution. The outer casing of the product is cast aluminum alloy ZL102. Adopting one-time die-casting process, the surface is smooth, the appearance is beautiful, the internal. This is why the Explosion-proof terminal box plays a central role in chemical plants, refineries, oil exploitation sites, offshore platforms, oil tankers, military facilities, and other locations classified as dangerous areas. Downtime can also disrupt daily operations. Rather than treating this enclosure as a simple accessory, engineers.
