

Fiber Optic Communication Product Catalog

Overview

Corning's optical fiber products enable the voice, data, and video communications that are transforming our world.

Key Takeaways

Fiber optic communication products encompass cables, connectors, splicing systems, test equipment, and networking solutions for diverse applications in telecommunications, data centers, and industrial networks.

- Single-mode fiber cables: Designed for long-distance transmission with a small core diameter, ideal for telecom and long-haul networks .

- Multimode fiber cables: Larger core diameter for short-distance, high-bandwidth applications such as data centers and LANs .

- Fiber bundles and patch cords: Pre-assembled cables for easy deployment and interconnection .

Fiber Optic Connectors

- SC (Subscriber Connector): Square push-pull connector, widely used in FTTH and data centers .

- LC (Lucent Connector): Miniaturized connector for high-density applications, common in modern data centers .

- ST (Straight Tip): Bayonet-style connector for legacy and industrial networks .

- FC (Ferrule Connector): Threaded connector for high-vibration environments, used in factories and railway networks .

- MPO/MTP connectors: Multi-fiber connectors for high-density applications and parallel optics .

Splicing and Patch Systems

- SlimConnect: High-density 1U rack system supporting up to 96 fibers, suitable for data centers and large office buildings .

- VarioConnect, BasicConnect, EasyConnect, RailConnect: Modular systems for various applications, from compact installations to high-performance networks .

- Permanent and modular splicing systems: Ensure low attenuation and reliable fiber connections .

Fiber Optic Networking Solutions

- Optical switches and multiplexers: Enable efficient routing and signal management in complex networks .

- Polarization control devices: Maintain signal integrity in sensitive optical systems .

- Optomechanics: Components for precise alignment and handling of optical fibers .

Test and Measurement Equipment

- OTDRs (Optical Time-Domain Reflectometers): Measure fiber length, loss, and faults.

- Power meters and light sources: Evaluate signal strength and quality.

- Inspection microscopes: Ensure connector and fiber end-face quality .

Additional Components

- Amplifiers and repeaters: Boost signal strength for long-distance transmission .

- Sensors and switches: Integrate fiber optics into industrial and monitoring applications .

- Custom solutions: Tailored fiber optic assemblies for specialized requirements . This comprehensive range of fiber optic products supports telecommunications, data centers, industrial networks, and research applications, providing solutions for both standard and custom deployments .
