

How to apply protective tubing to yellow fiberglass

Overview

First, thoroughly clean the fiberglass with warm, soapy water to remove dirt, followed by a solvent-based degreaser to eliminate wax, silicone, and other contaminants that inhibit adhesion. Next, the surface requires sanding to create a mechanical profile, or “tooth,” that the. For surfaces that are already in good condition, a clear sealant or marine wax provides temporary UV and moisture protection. These options offer the easiest application but must be reapplied frequently, as they lack the chemical permanence and thickness of a two-part paint or gelcoat. For most fiberglass repair projects, we recommend using the WEST SYSTEM 105 Epoxy Resin System for its strength and versatility. Fill in any cracks or gouges in the fiberglass with polyester. Fiberglass work doesn't have to be difficult, in fact fiberglass work can be EASY with the right techniques! This video is full of fiberglass TIPS and TRICKS, taught by a second-generation fiberglass boatbuilder, and is guaranteed to help you master the skill of fiberglass applicatio. more. For use as a general purpose acrylic coating, suitable for most surfaces where maximum indoor/outdoor durability is desired. It can be used on all wooden. The TotalBoat 5:1 Traditional Epoxy system forms high-strength bonds with fiberglass, wood, reinforcement fabrics, and metals. Protect the surrounding area: Use poly sheeting.
