

Mixed 10 Gigabit and Gigabit Aggregation Switches

Overview

Built with a durable metal enclosure and advanced switching architecture, the Aggregation Switch supports multiple Gigabit and 10G SFP uplinks for flexible deployment. Managed models feature SNMP, VLAN, QoS, LACP, and redundant power input to ensure continuous uptime. The series offers OSPF/BGP and multicast, SDN enabled and flexible management. 5G to 100GbE, these switches provide the power and flexibility needed for a wide range of environments, from small businesses and home offices to large. Revolutionary 5-speed Multi-Gigabit technology built in the NETGEAR multi-speed switches allows your devices to speed past the Gigabit barrier. Multi-Gig vs 5-speed, what is the difference?

MULTI-GIG PORT: Intelligent port that. Omada's 10G/multi-gigabit managed switches are equipped with 10 Gbps fiber, 10 Gbps copper, or 2. 5 Gbps Copper ports, offering maximum performance and low latency. Reliable and lightning-fast connections to WiFi 6 access points, storage servers, and other switches and devices are easily. Due to its 8 future-proof fiber-optics SFP+ ports this 10G aggregation switch acts as a superordinated instance for connecting further access switches in smaller distributed networks. Faster replacement and priority support, covered for 5 years.
