

What is FN distribution box

Overview

This distribution box is designed for FT/FN applications. It is typically used to house and protect electrical components and distribute power or signals. The primary function of CHINT's Final Distribution Board is to safely distribute electrical power to various circuits within a building or facility while providing essential protection and control. The FT/FN Distribution Box is engineered to provide a secure and organized housing for critical electrical components such as circuit breakers. The distribution box has the characteristics of small volume, easy installation, special technical performance, fixed position, unique configuration function, unrestricted site, common application, stable and reliable operation, high space utilization rate, small land occupation, and environmental. The distribution box (DB box) helps safely and efficiently distribute electrical power.
